

Weekly Report of CNCERT

Key Findings

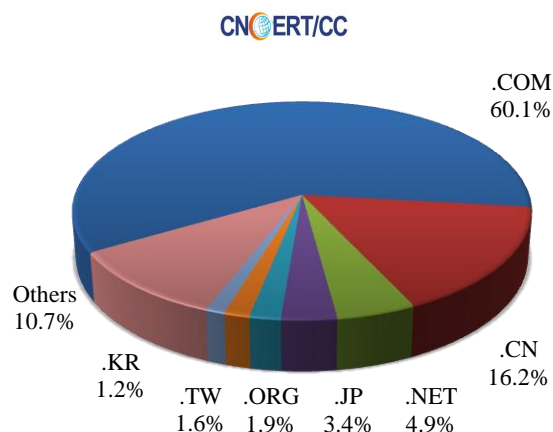

= marks the same number as last week; ↑ marks an increase from last week; ↓ marks a decrease from last week

The malware-hosting websites is the jumping-off place for malware propagation. The malware-hosting websites monitored by CNCERT this week involved 5,470 domains and 4,154 IP addresses. Among the 5,470 malicious domains, 25.3% were registered overseas and 60.1% of their TLDs fell into the category of .com. Among the 4,154 malicious IPs, 55.3% were overseas. Based on our analysis of the malware-hosting website's URLs, the majority of them were accessed via domain names, and only 531 were accessed directly via IPs.

Malware-hosting Websites' Domains Registered Home and Abroad (May 6-May 12)

TLD Distribution of the Malware-hosting Websites' Domains (May 6-May 12)

In terms of the malicious domain names and IPs either monitored by CNCERT or sourced from the reporting members, CNCERT has actively coordinated the domain registrars and other related agencies to handle them. Moreover, the blacklist of these malicious domains and IPs has been published on the website of Anti Network-Virus Alliance of China (ANVA).

Anti Network-Virus Alliance of China (ANVA) is an industry alliance that was initiated by Network and Information security Committee under Internet Society of China (ISC) and has been operated by CNCERT.

Website Security

This week, CNCERT monitored 5,187 defaced websites, 1,408 websites planted with backdoors and 1,854 phishing web pages targeting websites in mainland China.

This week, the defaced government (gov.cn) websites totaled 17 (0.3%). Backdoors were installed into 51 (3.6%) government (gov.cn) websites, an increase of 218.8% from last week. The fake domains and IP addresses targeting websites in mainland China reached 612 and 361 respectively, with each IP address loading about 5 phishing web pages on average.

Domain Categories of the Defaced Websites in Mainland China (May 6-May 12)

Domain Categories of the Backdoored Websites in Mainland China (May 6-May 12)

Vulnerabilities

This week, China National Vulnerability Database (CNVD) recorded 277 new vulnerabilities. This week's overall vulnerability severity was evaluated as medium.

Objectives Affected by the Vulnerabilities Collected by CNVD (May 6-May 12)

The Application was most frequently affected by these vulnerabilities collected by CNVD, followed by Web application and Database.

For more details about the vulnerabilities, please review CNVD Weekly Vulnerability Report.

China National Vulnerability Database (CNVD) was established by CNCERT, together with control systems, ISPs, ICPs, network security vendor, software producers and internet enterprises for sharing information on vulnerabilities.

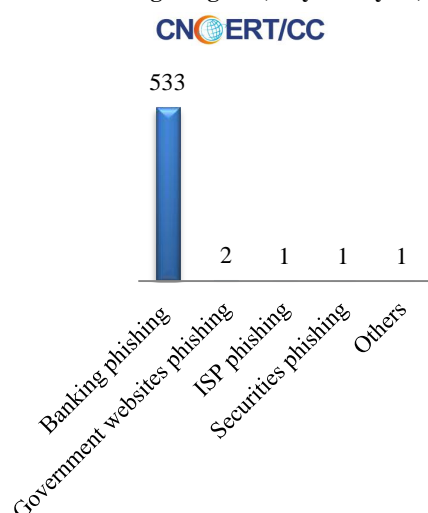

Incident Handling

This week, CNCERT has handled 322 network security incidents, 148 of which were cross-border ones, by coordinating ISPs, domain registrars, mobile phone application stores, branches of CNCERT and our international partners.

Specifically, CNCERT has coordinated domestic and overseas domain registrars, international CERTs and the other organizations to handle 538 phishing incidents. Based on industries that these phishing targets belong to, there were 533 banking phishing incidents and 2 government websites phishing incidents.

Phishing Incidents Handled by CNCERT Based on Industries of the Phishing Targets (May 6-May 12)

CNCERT Coordinated Domestic to Handle Phishing Incidents (May 6-May 12)

CNCERT Coordinated Mobile Phone Application Stores to Handle Mobile Malware (May 6-May 12)

This week, CNCERT has coordinated 18 mobile phone application store and malware-injected domains to handle 36 malicious URL of the mobile malware.

About CNCERT

The National Computer network Emergency Response Technical Team / Coordination Center of China (CNCERT or CNCERT/CC) is a non-governmental, non-profitable organization of network security technical coordination. Since its foundation in Sep.2002, CNCERT has dedicated to carrying out the work of preventing, detecting, warning and handling China network security incidents under the policy of “positive prevention, timely

detection, prompt response, guaranteed recovery”, to maintain the safety of China public Internet and ensure the safe operation of the information network infrastructures and the vital information systems. Branches of CNCERT spread in 31 provinces, autonomous regions and municipalities in mainland China.

CNCERT is active in developing international cooperation and is a window of network security incidents handling to the world. As a full member of the famous international network security cooperative organization FIRST and one of the initiators of APCERT, CNCERT devotes itself to building a prompt response and coordination handling mechanism of cross-border network security incidents. By 2017, CNCERT has established “CNCERT International Partners” relationships with 211 organizations from 72 countries or regions.
